

לוגיקה: תחשיב הפסוקים

1

יחידה 2 הוכחות בתחשיב הפסוקים

2

הרעיון הבסיסי

טבלאות אמת הן כלי לא מאד יעיל
אנחנו מפרטים את **כל** המקרים האפשריים
בעוד ש**רק** המקרים בהם **כל** ההנחות אמיתיות מעניינים אותנו.

3

Basic Idea

We start with a few argument forms,
which we **know** are valid,
and we use these
to demonstrate that other argument forms are valid.

We demonstrate (show) that
a given argument form is valid by
deriving (deducing) its conclusion
from its premises
using a few **fundamental modes of reasoning**.

4

Example 1 – Modus Ponens (MP)

$A \rightarrow C$	if A then C
A	A
-----	-----
C	C

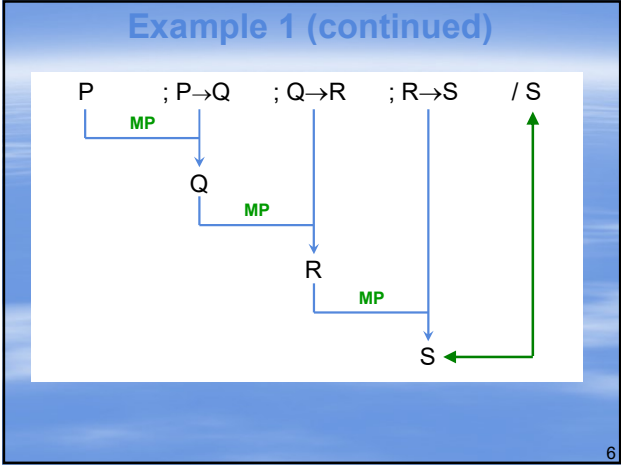

a *derivative* argument form

we can employ *modus ponens* (MP)
to *derive* the conclusion from
the premises.

P
$P \rightarrow Q$
$Q \rightarrow R$
$R \rightarrow S$

S

5

6

Derivations – How to Start

argument : $P ; P \rightarrow Q ; Q \rightarrow R ; R \rightarrow S / S$

1. write down premises

2. write down "SHOW:" conclusion

(1)	P	Pr(emise)
(2)	$P \rightarrow Q$	Pr
(3)	$Q \rightarrow R$	Pr
(4)	$R \rightarrow S$	Pr
(5)	SHOW: S	(the goal)

7

Derivations – How to Continue

3. apply rules, as appropriate, to available lines until goal is reached

(1)	P	Pr	
(2)	$P \rightarrow Q$	Pr	
(3)	$Q \rightarrow R$	Pr	
(4)	$R \rightarrow S$	Pr	
(5)	SHOW: S	(goal)	
(6)	Q	1,2, MP	←
(7)	R	3,6, MP	
(8)	S	4,7, MP	

follows from lines 1 and 2 by modus ponens

8

7

8

Derivations – How to Finish

4. Box and Cancel

(1)	P	Pr
(2)	$P \rightarrow Q$	Pr
(3)	$Q \rightarrow R$	Pr
(4)	$R \rightarrow S$	Pr
(5)	SHOW: S	DD
(6)	Q	1,2, MP
(7)	R	3,6, MP
(8)	S	4,7, MP

DD = Direct Derivation

9

9

Example 2

$\sim S ; R \rightarrow S ; Q \rightarrow R ; P \rightarrow Q ; / \sim P$

(1)	$\sim S$	Pr
(2)	$R \rightarrow S$	Pr
(3)	$Q \rightarrow R$	Pr
(4)	$P \rightarrow Q$	Pr
(5)	SHOW: $\sim P$	DD
(6)	$\sim R$	1,2, MT
(7)	$\sim Q$	3,6, MT
(8)	$\sim P$	4,7, MT

10

10

Example 3

$\sim S ; R \rightarrow S ; \sim R \rightarrow \sim T ; P \rightarrow T ; \sim P \rightarrow \sim Q / \sim Q$

(1)	$\sim S$	Pr
(2)	$R \rightarrow S$	Pr
(3)	$\sim R \rightarrow \sim T$	Pr
(4)	$P \rightarrow T$	Pr
(5)	$\sim P \rightarrow \sim Q$	Pr
(6)	SHOW: $\sim Q$	DD
(7)	$\sim R$	1,2, MT
(8)	$\sim T$	3,7, MP
(9)	$\sim P$	4,8, MT
(10)	$\sim Q$	5,9, MP

11

11

Initial Inference Rules

Modus Ponens

$$\begin{array}{l} A \rightarrow C \\ A \\ \hline C \end{array}$$

Modus Tollens

$$\begin{array}{l} A \rightarrow C \\ \sim C \\ \hline \sim A \end{array}$$

Modus Tollendo Ponens (1)

$$\begin{array}{l} A \vee B \\ \sim A \\ \hline B \end{array}$$

Modus Tollendo Ponens (2)

$$\begin{array}{l} A \vee B \\ \sim B \\ \hline A \end{array}$$

12

12

Examples of Modus Ponens

$A \rightarrow C$ A <hr style="width: 50%; margin: 5px auto;"/> C	$(P \& Q) \rightarrow (R \vee S)$ $P \& Q$ <hr style="width: 50%; margin: 5px auto;"/> $R \vee S$	$\sim P \rightarrow \sim Q$ $\sim P$ <hr style="width: 50%; margin: 5px auto;"/> $\sim Q$
---	---	---

13

Examples of Modus Tollens

$A \rightarrow C$ $\sim C$ <hr style="width: 50%; margin: 5px auto;"/> $\sim A$	$(P \& Q) \rightarrow (R \vee S)$ $\sim(R \vee S)$ <hr style="width: 50%; margin: 5px auto;"/> $\sim(P \& Q)$	$\sim P \rightarrow \sim Q$ Q <hr style="width: 50%; margin: 5px auto;"/> P
---	---	---

valid argument
BUT
NOT an example of MT

14

Form versus Content/Value

are the dime and ten pennies the same? **NO**
 are they the same **in value**? **YES**

15

Examples of MTP(1)

$A \vee B$ $\sim A$ <hr style="width: 50%; margin: 5px auto;"/> B	$(P \& Q) \vee (R \vee S)$ $\sim(P \& Q)$ <hr style="width: 50%; margin: 5px auto;"/> $R \vee S$	$\sim P \vee \sim Q$ $\sim \sim P$ <hr style="width: 50%; margin: 5px auto;"/> $\sim Q$
---	--	---

16

Examples of MTP(2)

$A \vee B$ $\sim B$ <hr style="width: 50%; margin: 5px auto;"/> A	$(P \& Q) \vee (R \vee S)$ $\sim(R \vee S)$ <hr style="width: 50%; margin: 5px auto;"/> $P \& Q$	$\sim P \vee \sim Q$ $\sim \sim Q$ <hr style="width: 50%; margin: 5px auto;"/> $\sim P$
---	--	---

17

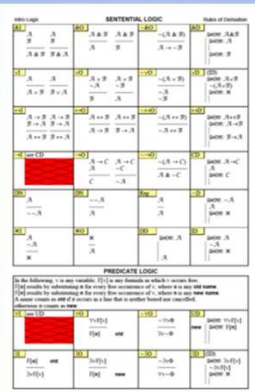

Rule Sheet

provided on exam

available on Moodle

make a copy and

keep it in front of you when doing homework

don't make up your own rules

18

Rules of Inference – Basic Idea

(almost) every connective has an

- ◆ **OUT-rule** how to **break-down** a formula with this connective
- ◆ **IN-rule** how to **build-up** a formula with this connective

19

Rules discussed next

&I $\frac{A \quad B}{A \& B}$	&O $\frac{A \& B}{A} \quad \frac{A \& B}{B}$
vI $\frac{A \quad A \quad B \vee A}{A \vee B}$	vO $\frac{A \vee B \quad \sim A}{B} \quad \frac{A \vee B \quad \sim B}{A}$
~I see CD <div style="background-color: red; width: 100px; height: 40px; margin: 5px 0;"></div>	~O $\frac{A \rightarrow B \quad A \rightarrow \sim B}{B \quad \sim A}$
DN $\frac{A}{\sim \sim A}$	DN $\frac{\sim \sim A}{A}$

20

Ampersand-Out (&O)

if you have a **conjunction** $A \& B$
then you are entitled to infer
its **first conjunct** A

if you have a **conjunction** $A \& B$
then you are entitled to infer
its **second conjunct** B

‘have’ means ‘have as a **whole line**’

rules apply **only** to whole lines
not pieces of lines

21

Ampersand-IN (&I)

if you have a **formula** A
and you have a **formula** B
then you are entitled to infer
their (first) **conjunction** $A \& B$

if you have a **formula** A
and you have a **formula** B
then you are entitled to infer
their (second) **conjunction** $B \& A$

22

Wedge-Out (vO)

if you have a **disjunction** $A \vee B$
and you have the **negation** of its **1st disjunct** $\sim A$
then you are entitled to infer
its **second disjunct** B

if you have a **disjunction** $A \vee B$
and you have the **negation** of its **2nd disjunct** $\sim B$
then you are entitled to infer
its **first disjunct** A

what we earlier called ‘modus tollendo ponens’

23

Wedge-IN (vI)

if you have a **formula** A
then you are entitled to infer
its **disjunction** with **any** formula to its right $A \vee B$

if you have a **formula** A
then you are entitled to infer
its **disjunction** with **any** formula to its left $B \vee A$

24

Arrow-Out (\rightarrow O)

if you have a **conditional** $A \rightarrow C$
and you have its **antecedent** A
then you are entitled to infer
its **consequent** C

if you have a **conditional** $A \rightarrow C$
and you have the **negation** of its **consequent** $\sim C$
then you are entitled to infer
the **negation** of its **antecedent** $\sim A$

what we earlier called
'modus ponens' and 'modus tollens'

25

Arrow-Introduction

**THERE IS NO SUCH THING AS
ARROW-IN (\rightarrow I)**

what we have instead is
**CONDITIONAL DERIVATION
(CD)**

☺

which we examine later

26

Double-Negation (DN)

if you have a formula A
then you are entitled to infer
its double-negative $\sim\sim A$

if you have a double-negative $\sim\sim A$
then you are entitled to infer
the formula A

rules apply **only** to whole lines
not pieces of lines

27

Direct Derivation

The Original and Fundamental SHOW-Rule

SHOW: A DD

◦

◦

◦

A

In Direct Derivation (**DD**),
one **directly** arrives at
the **very** formula
one is trying to show.

29

Arrow-Out Strategy

If you **have** a line of the form $A \rightarrow C$,
then try to apply **arrow-out** (\rightarrow O),
which requires a second formula as input,
in particular, either A or $\sim C$.

have	$A \rightarrow C$		
find	A	or	$\sim C$
deduce	C		$\sim A$

30
